

I claim:

1. A slumber bag for covering the legs and lower torso of a child comprising a cover portion having a front panel and a connected back panel, which front and back panels together define an opening at one end of the cover portion; and fitting straps located at or  
5 near said opening in order to partially close said opening, and wherein said fitting straps preferably comprises first and second straps on either said front and/or said back panels and at least one connector for releasably attaching said first and second straps together; and optionally adjustment means for adjusting the length of said first or second straps.
2. A slumber bag as claimed in Claim 1 wherein said fitting straps are two part straps  
10 which are joined together with said connector, and wherein said fitting straps included adjustment means for adjusting the overall length of said straps.
3. A slumber bag as claimed in Claim 1 having at least two fitting straps wherein said fitting straps preferably comprise at least one back strap attached to said back panel, at least one front strap connected to said front panel; and a connector for releasably joining said back  
15 strap to said front strap.
4. A slumber bag as claimed in Claim 1 wherein said fitting straps are orientated so as to be essentially parallel to the edge of said opening.
5. A slumber bag as claimed in Claim 1 wherein the front and back panels are joined to one another around their circumference, with the exception of the opening.
- 20 6. A slumber bag as claimed in Claim 5 wherein said front and back panels are formed by folding a larger panel to form a first side, and said front and back panels are joined together at a closed end and at a second side, using a zipper.

7. A slumber bag as claimed in Claim 3 wherein said connector is a parachute clip.
8. A slumber bag as claimed in Claim 1 wherein said child is between the ages of 6 months and 36 months.
9. A slumber bag as claimed in Claim 1 additionally comprising a releasably attached  
5 pillow section connected to said back panel at or near said opening, and extending above said back panel.
